

Information About *Dow Corning*[®] Brand LED Materials

Silicones and Electronics

Silicones have long been known for durable dielectric insulation, as barriers against environmental contaminants and for their stress-relieving shock and vibration absorption. They can sustain their physical and electrical properties over a wide range of temperature, humidity and other harsh environmental conditions.

Capitalizing on these basic properties, *Dow Corning*[®] brand silicone LED (light emitting diode) encapsulants can be designed to meet the challenging needs of the LED market, including high adhesion, high purity, moisture resistance, thermal stability and optical transmittance.

Silicone materials can absorb stresses caused by thermal cycling inside the package, protecting the chip and the bonding wires. And with the electronics industry quickly moving toward lead-free processing, silicone encapsulants, with their demonstrated, excellent stability at reflow temperatures, are a natural fit for LED applications.

Features/Benefits

- Excellent thermal stability – greater reliability in processing and performance
- Low moisture uptake – greater reliability in the field
- Tuneable modulus – design flexibility
- Low ionic content
- Excellent optical properties – useful for a broad range of applications
- Addition cure – no byproducts and minimal shrinking
- Solvent-free – no hazardous emissions

Fast Formulation

Dow Corning manufactures a wide variety of LED materials to meet the needs of most application and process situations, and we are continuously expanding our product offerings to ensure that there are specific products to meet your needs. However, if you can't find an exact match for your needs, Dow Corning can modify any of our existing products to help meet your exact needs through our *Fast Formulation* process. Examples of *Fast Formulation* options include modification of a product's cure schedule, modulus or viscosity.

Gels

Type

One- or two-part silicone heat-cure gels

Physical Form

Provided as low- to medium-viscosity liquids; cures to a soft, stress-relieving gel

Special Properties

Transparent with 1.41 refractive index; low moisture pickup

Potential Uses

Seal and protect LEDs

Elastomers

Type

One- or two-part silicone heat-cure elastomers; fast- or standard-cure materials available

Physical Form

Provided as low- to medium-viscosity liquid; cures to a firm but flexible elastomer

Special Properties

Transparent with refractive index ranging from 1.41 to 1.52; low moisture pickup

Potential Uses

Seal and protect LEDs

Resins

Type

Two-part silicone heat-cure material

Physical Form

Cures to a hard material for LED fabricated parts

Special Properties

High refractive index with excellent transparency; low moisture pickup

Potential Uses

Seal and protect LEDs, discrete lenses for LEDs and optical parts

Total Support

Related Products – Dow Corning features a unique interactive product finder on our website for a broad range of products such as thermal interface materials. You can access the product finder at www.dowcorning.com/electronics by selecting “Technical Data” on any of our product family pages.

Analytical, Environmental and Physical Testing – We have expertise to share on a wide range of testing to monitor quality, on specialized testing for troubleshooting, or to assist in reliability testing.

Consultation with Technical Experts – Have our experts visit your facility or join us at one of our global application centers to work together on your material and processing needs. We can provide seminars and training for your personnel to allow them to work more knowledgeably. Dow Corning can assist in material, process and equipment integration for your application needs.

Tutorials – LED and other silicone tutorials can be found on our website. The tutorials are accessible from the product family pages or the left-hand navigation bar under Technical Library.

Product/Application Information

SURFACE PREPARATION AND ADHESION

Surfaces should be clean and dry. Recommended cleaning methods include *Dow Corning*[®] brand OS Fluids, naphtha, mineral spirits, methyl ethyl ketone (MEK) or other suitable solvent. Rougher surfaces tend to promote adhesion of silicones to other surfaces.

Dow Corning LED materials are specially designed for adhesion to commonly used LED substrates. Surface treatments such as chemical etching or plasma treatment may provide a reactive surface and improve adhesion to these types of substrates.

In general, increasing the cure temperature and/or cure time will improve the ultimate adhesion.

USEFUL TEMPERATURE RANGES

For most uses, silicone encapsulants and resins (except for JCR 6175) should be operational over a temperature range of -45 to 200°C (-49 to 392°F) for long periods of time. However, at both the low- and high-temperature ends of the spectrum, behavior of the materials and performance in particular applications can become more complex and require additional considerations.

For low-temperature performance, thermal cycling to conditions such as -55°C (-67°F) may be possible, but performance should be verified for your parts or assemblies.

Factors that may influence performance are configuration and stress sensitivity of components, cooling rates and hold times, and prior temperature history.

At the high-temperature end, the durability of the cured silicone encapsulants and resins is time and temperature dependent. As expected, the higher the temperature, the shorter the time the material will remain useable.

Application

These products are also compatible with commercially available equipment and industry standard processes. These materials can be dispensed or molded depending on the product and application.

Dow Corning OS Fluids are recommended to clean cured or uncured silicone residue from application equipment.

COMPATIBILITY

Certain materials, chemicals, curing agents and plasticizers can inhibit the cure of addition-cure silicones. Most notable of these include:

- Organotin and other organometallic compounds
- Silicone rubber containing organotin catalyst
- Sulfur, polysulfides, polysulfones or other sulfur-containing materials
- Amines, urethanes or amine-containing materials
- Unsaturated hydrocarbon plasticizers
- Some solder flux residues

If a substrate or material is questionable with respect to potentially causing inhibition of cure, it is recommended that a small scale compatibility test be run to ascertain suitability in a given application. The presence of liquid or uncured product at the interface between the questionable substrate and the cured silicone indicates incompatibility and inhibition of cure.

STORAGE AND SHELF LIFE

Shelf life is indicated by the “Use Before” date found on the product label.

For best results, *Dow Corning* one-part products require cold storage at or below -5°C (23°F). Special precautions must be taken to prevent moisture from contacting these materials. Containers should be kept tightly closed with head space minimized. Partially filled containers should be purged with dry air or other gases, such as nitrogen.

Dow Corning two-part products should be stored at or below 25°C (77°F). Containers should be kept tightly closed at all times to extend shelf life.

Check the product label for specific storage conditions.

PRODUCT INFORMATION

Dow Corning® Brand Product	Description	Features
Gels		
JCR 6109	1-part, translucent, low-modulus LED gel encapsulant	One-part formulation; very long working time
JCR 6110 A/B	2-part, transparent, low-modulus LED gel encapsulant	High transparency; long working time
<i>Hipoc</i> ® Q3-6646 Semiconductor Protective Coating Kit	2-part, transparent, low-modulus LED gel encapsulant	High transparency; low viscosity; very long working time
Elastomers		
JCR 6101	1-part, translucent, medium-modulus LED encapsulant	One-part formulation; very long working time
JCR 6101 UP	1-part, translucent, medium-modulus LED encapsulant	Thixotropic; higher viscosity version of JCR 6101
JCR 6115	2-part, low-modulus LED encapsulant	Low viscosity; fast cure; very long working time
JCR 6122	2-part, transparent, medium-modulus LED encapsulant	Very low viscosity; very long working time; high transparency
JCR 6126 W/C	2-part, translucent, medium-modulus LED encapsulant	Thixotropic; very long working time
JCR 6140	2-part, transparent, medium-modulus LED encapsulant	High transparency; medium viscosity
EG-6301	2-part, transparent, high-modulus (hard) LED encapsulant	High transparency; harder elastomer; very long working time
OE-6336	2-part, transparent, LED encapsulant	Lower-viscosity version of EG-6301
JCR 6175	2-part, transparent, LED encapsulant	High refractive index (>1.52); high transparency; very long working time
Resins		
SR-7010	2-part, hard, clear LED resin for fabricated parts	High refractive index/excellent light transparency; hard-resin material for molding fabricated parts

SR-7010	2-part resin	1-kg/1-kg can

LIMITATIONS

These products are neither tested nor represented as suitable for medical or pharmaceutical uses.

SAFE HANDLING INFORMATION

PRODUCT SAFETY INFORMATION REQUIRED FOR SAFE USE IS NOT INCLUDED. BEFORE HANDLING, READ PRODUCT AND MATERIAL SAFETY DATA SHEETS AND CONTAINER LABELS FOR SAFE USE, PHYSICAL AND HEALTH HAZARD INFORMATION. THE MATERIAL SAFETY DATA SHEET IS AVAILABLE ON THE DOW CORNING WEBSITE AT WWW.DOWCORNING.COM, OR FROM YOUR DOW CORNING REPRESENTATIVE, OR DISTRIBUTOR, OR BY WRITING TO DOW CORNING CUSTOMER SERVICE, OR BY CALLING (989) 496-6000.

HEALTH AND ENVIRONMENTAL INFORMATION

To support customers in their product safety needs, Dow Corning has an extensive Product Stewardship organization and a team of Product Safety and Regulatory Compliance (PS&RC) specialists available in each area.

For further information, please see our website, www.dowcorning.com, or consult your local Dow Corning representative.

LIMITED WARRANTY INFORMATION – PLEASE READ CAREFULLY

The information contained herein is offered in good faith and is believed to be accurate. However, because conditions and methods of use of our products are beyond our control, this information should not be used in substitution for customer's tests to ensure that Dow Corning's products are safe, effective, and fully satisfactory for the intended end use. Suggestions of use shall not be taken as inducements to infringe any patent.

Dow Corning's sole warranty is that the product will meet the Dow Corning sales specifications in effect at the time of shipment.

Your exclusive remedy for breach of such warranty is limited to refund of purchase price or replacement of any product shown to be other than as warranted.

DOW CORNING SPECIFICALLY DISCLAIMS ANY OTHER EXPRESS OR IMPLIED WARRANTY OF FITNESS FOR A PARTICULAR PURPOSE OR MERCHANTABILITY.

DOW CORNING DISCLAIMS LIABILITY FOR ANY INCIDENTAL OR CONSEQUENTIAL DAMAGES.

For More Information

To learn more about these and other products available from Dow Corning, please visit the Dow Corning Electronics website at www.dowcorning.com/electronics.
