

BETALINK™ K1/K2

Dow Automotive

OEM Quality for Aftermarket Trim Fixing

BETALINK™ K1 and K2 adhesives are OEM-quality products that let you fix body trim, wheel-arch extensions, spoilers and other items easily and without drilling.

BETALINK K1 is a simple one-component adhesive that doesn't require primer on most painted surfaces and plastic trim parts.

BETALINK K2 is a two-component adhesive that offers very short drive-away time in all weather.

Advantages:

- Extremely easy to use, with no drilling required.
- Long working time.
- Bond lasts for life of the car under normal driving conditions.
- TUV approved for spoiler bonding.
- BETALINK K2 gives you **one-hour drive away** – car-wash safe after 48 hours.

BETALINK™ K2 kit includes 125 ml bottle, BETACLEAN™ 3350 and 15 m bottle of BETAPRIME™ 5402 primer.

Two easy ways for permanent bonding of trim parts

BETALINK™ K1

This one-component moisture-curing polyurethane (PU) adhesive system is simple to use and provides a permanent bond. It can be used primerless on paint and most of the plastics used for trim and spoilers. Your customers can drive away in about five hours (six hours if the temperature is below 23°C.)

BETALINK K2

This two-component PU cures almost independently of ambient temperature and humidity. Safe drive-away time is one hour – 15 hours if the ambient temperature is less than 10°C.

Easy to use

BETALINK K1 and K2 are part of a simple system of products for permanent installation of trim parts. Here's a quick overview of a typical installation.

1. Sand plastic parts.
2. Clean the mating surfaces of the car body and the spoiler or trim piece with BETACLEAN™ 3350 cleaner.
3. If using BETALINK K2 adhesive, prime the body and trim surfaces with BETAPRIME 5402.
4. Apply BETALINK™ adhesive to trim and affix the part to the car body for 30 minutes, using weights or clamps.

Always follow full installation instructions that come with Dow Automotive products. Please contact Dow Automotive's technical service department for additional information.

BETALINK K1 one-component primerless adhesive.

Dow Automotive – your best partner, always at your side

When you use BETALINK adhesives, you're not only helping to assure your customer of a high-strength permanent trim installation. You're teaming up with a partner who gives you the best support available.

The best training. The best technical information. The best response to your questions and needs.

The worldwide leader in automotive bonding technology

Today, more than half of all new vehicles built worldwide use structural and glass bonding systems from Dow Automotive – more than 30 million per year.

When you use products from Dow Automotive, you can assure your customers that they are getting OEM-approved quality – to help restore the repaired area to like-new condition.

Your customers count on you for reliable, high-quality repair – and for their safety. With products like BETALINK adhesives, it's easy to give them high-quality work, while keeping your materials costs low and making the work go faster and easier.

We listen. We deliver.
